

Graphics drivers for L^AT_EX 2_ε*

Sebastian Rahtz and David Carlisle

2015/12/30

This file is maintained by the L^AT_EX Project team.
Bug reports can be opened (category `graphics`) at
<http://latex-project.org/bugs.html>.

1 Driver files

This file implements some of the currently supported drivers. If the driver you use is not in this list then a ‘.def’ file may be distributed with This graphics bundle, or may be distributed with your driver.

If not, send us some details of the driver’s `\special` syntax, and we will try to produce a suitable file.

Note that some of these files are for drivers to which we have no access, so they are untested. Please send any corrections to the latexbugs address.

2 Colour

Most of the drivers that support colour use one of three methods.

- `color1`: ‘dvips’ style colour specials.
- `color2`: ‘textures’ style colour specials.
- `color3`: Colour implemented via literal PostScript specials.
- `color4`: Colour implemented by specials that only support RGB, i.e., Red Green Blue specified as integers in the range 0–255. Other models converted to this within T_EX.

Some drivers do not use any of these modules and have their own code. Note that drivers using the ‘`color3`’ code can not fully support the L^AT_EX colour commands.

*Version v3.0k, revised 2015/12/30

Need to make sure of a trailing .0 for textures. Apparently it is OK to always add a . as 1.3. is accepted by textures. textures gray special is reversed, so just use rgb instead.

23 dviwin

A L^AT_EX 2_ε graphics driver file for Hippocrates Sendoukas' dviwin
710 (*dviwin)

23.1 Graphic file inclusion

Dviwin sorts out the graphics type itself based on extension. They all use the same `\special`, so as far as `graphics.sty` is concerned they are all the same 'type'. Use 'bmp' for the type as that is as good a name as any. Make this the default.

```
711 \@namedef{Gin@rule@*}#1{{bmp}}{#1}}
712 \def\Gininclude@bmp#1{%
713   \raise\Gin@req@height\hbox{%
714     \special{anisoscale #1,
715       \the\Gin@req@width\space \the\Gin@req@height}}}
```

The only exception is EPS files, as they may be read for BoundingBox

```
716 \@namedef{Gin@rule@.ps}#1{{eps}}{.ps}{#1}}
717 \@namedef{Gin@rule@.eps}#1{{eps}}{.eps}{#1}}
718 \let\Gininclude@eps\Gininclude@bmp
```

Add a few default extensions so `\includegraphics{a}` will pick up `a.eps` or `a.wmf`. This list can be reset with `\DeclareGraphicsExtensions`. Other extensions not in the list may be used explicitly, eg `\includegraphics{a.gif}` should work as long as dviwin has access to a gif filter. If `.gif` is added using `\DeclareGraphicsExtensions` then `\includegraphics{a}` would also find `a.gif`.

```
719 \def\Gin@extensions{.eps,.ps,.wmf,.tif}

```

25.1 Colour

Uses the ‘color4’ colour code.

25.2 Graphic file inclusion

EPS File inclusion: DVIPS style.

26 tcidvi

A L^AT_EX 2_ε graphics driver file for Scientific Word/Workplace. Actually for the Kinch truetex driver, augmented with extra `\special` handling with the DLL supplied with SW.

```
756 \*tcidvi

26.1 Colour

Uses the 'color4' colour code.

The above colours are handled by the Kinch-supplied dll The TCI dll adds support for `\colorbox`, but only grey scale The code below accepts any color model, but only the red component is used.

27 Literal Postscript

Most drivers writing to PostScript allow some form of ‘literal’ PostScript `\special` that inserts code into the final PostScript output. However Non-PS drivers can not support this (and some PS one’s can’t either). The code here makes all these commands no ops. Individual driver sections may define the commands to do something useful.

```
