1 Release TODO

The following steps have to be done for every release:

- for 1.13:
 - ✓Copy the external lib (both coreexternal + tikz lib) to pgfplots (feature with label/ref)
 - ✓backw. layer for luamath library: bugfix which is not in 3.0.1
 - ✓finish colormap access=direct: docs, styles for colorbar
 - ✓finish discussion with Stefan Pinnow: colorbar sampled and its use-cases

 should be possible with `color` of `colormap`:
<http://tex.stackexchange.com/questions/285483/how-to-match-color-of-user-placed-label>

- run tests against pgf CVS
- run tests against latest pgf stable
- finish manual
 - update the description for the `compat` key to the most recent version
 - update `pgfplots.preamble.tex` such that it contains `—compat=—newest`
 - fix warnings
 - browse through it
- ensure that the “compile” matrix (below this list) is complete for pgf CVS and the latest pgf Stable
- update `ChangeLog` with “RELEASED VERSION XXX” and update `README`
- assign git tag for new version
- run `scripts/pgfplots/pgfplotsrevisionfile.sh` to assign the package versions based on tag
(done automatically when compiling the manual)
- recompile manual (to pick up the correct version)
- run primitive example files

- run context tests (basically compile and browse-through. There are no assertions.)
 - run against pgf CVS
 - run against latest pgf stable
- adjust the release makefile to get correct file names
- assemble TDS.zip and CTAN.zip (using the release makefile)
 - `make -f pgfplots/scripts/pgfplots/Makefile.pgfplots_release_sourceforge`
this creates the release files
 - make sure the archives do not contain wrong files.
- upload to CTAN.

```
Submitted to host
dante.ctan.org
Your name and email
    Christian Feuersaenger <cfeuersaenger@users.sourceforge.net>
Filename
    pgfplots_1.6.1.ctan.flatdir.zip
Version number
    1.6.1
Location on CTAN
    /graphics/pgf/contrib/pgfplots/
Summary description
    pgfplots - Create normal/logarithmic plots in two and three dimensions for LaTeX.
License type
    gpl
Announcement text
...
Notes to maintainers
    As requested, I created a flat directory structure containing all files (i.e. it
```

- release to sourceforge.
 - Make sure to update the README at top-level.
 - make sure to mark the new TDS as “default download for all platforms”
- upload to sourceforge web space (using the release makefile)
 - `make -f pgfplots/scripts/pgfplots/Makefile.pgfplots_release_sourceforge uploaddis`
this copies the manuals
 - change `Makefile.pgfplots_release_sourceforge` back to unstable
 - `make -f pgfplots/scripts/pgfplots/Makefile.pgfplots_release_sourceforge upload`
this updates the unstable
 - if necessary, update `scp://cfeuersaenger,pgfplots@web.sourceforge.net/htdocs/index.php`
- send announcement to `pgfplots-features@lists.sourceforge.net`

2 Tests

last test verifications:

	pgf CVS	pgf 3.0.1	pgf 3.0.0	pgf 2.10	pgf 2.00	pgf 2.00+co
regressiontests	for 1.13	for 1.13	for 1.12.1	for 1.12*	for 1.8 (7% fail)	2009-12-30
unittests	for 1.13	for 1.13	for 1.12	for 1.12		
manual	for 1.13	for 1.13	for 1.12	for 1.9	for 1.5	
pgfplotstable.pdf	for 1.13	for 1.13	for 1.12	for 1.9	for 1.5	
example latex	for 1.13			for 1.9	2009-12-30	
example context(mkII)	for 1.13			for 1.9	2009-12-30	
example context(mkIV)	for 1.13		for 1.12.1	for 1.9	2009-12-30	
example plain tex	for 1.13			for 1.9	2009-12-30	
tests context (mkII)	for 1.13		for 1.12	for 1.9		
tests context (mkIV)	for 1.13		for 1.12*			

Note that context MK IV needs the pgfplots installed in \sim /texmf (doesn't respect environment variables)

context MK IV may need a special environment like \cdot \sim /context/tex/setuptex

3 Documentation todo

pgfplotstodo.tex:196

Documentation Todo [open, Priority 5, Epic ‘']

document $\backslash\boldsymbol{\mathit{math}}$ $\$ \dots \$$ for pgfplotstable

pgfplotstodo.tex:211

Documentation Todo [open, Priority 5, Epic ‘']

Document standalone vs. external

- standalone does not work with loops (compare <http://tex.stackexchange.com/questions/191108/how-to-avoid-copied-code-with-the-combination-pgfplots-standalone>)
- generating just one single figure without a document is simpler with standalone
- external integrates seamlessly
- external can be enabled later-on
- external supports label+ref
- external supports make out of the box
- external supports bounding box control (trim)
- ...

- pgfplotstodo.tex:216 **Documentation Todo** [open, Priority 5, Epic ‘’]
 The new API for stacked plots + nodes near coords is missing, among it the normalized axis cs but see `\pgfplotspointgetnormalizedcoordinates`
- pgfplotstodo.tex:251 **Documentation Todo** [open, Priority 5, Epic ‘’]
 document installation requirements when using lualatex (LUAINPUTS should contain pgfplots install dir)
- pgfplotstodo.tex:340 **Documentation Todo** [open, Priority 5, Epic ‘’]
 bei dem Bsp-Tex zu pgfplotstable scheint eine Zeile im Tex-File zu fehlen:
`\usepackage{pgfplotstable}`
 Auerdem wre es zum Einstieg fr das aus der Datei lesen schn, wenn es zu den Daten auch ein kurzes Beispiel-File fr einen Plot gbe.
- pgfplotstodo.tex:597 **Documentation Todo** [open, Priority 5, Epic ‘’]
 try a bar plot with individually shaded bars

- pgfplotstodo.tex:664 **Documentation Todo** [open, Priority 5, Epic ‘’]
 document how to identify the source of "dimension too large" errors: tracingstuff.
- pgfplotstodo.tex:679 **Documentation Todo** [open, Priority 5, Epic ‘’]
 It seems as if the AMS command `\text{\ref{ref:to:a:plot}}` instantiates the `\ref` at least four times. Document somehow that it is better to use `\hbox` instead

pgfplotstodo.tex:688

Documentation Todo [open, Priority 5, Epic ‘]

clickable lib: I have the impression that acroread fires warnings only for the manual - not always when the clickable lib is used. Why!?

4 Bugs/Features in PGF/TikZ

pgfplotstodo.tex:712

pgfbug [open, Priority 5, Epic ‘]

topath in plots is broken since PGF 3.0.0: the following should be a single connected line (as it used to be for 2.10):

```
\documentclass{standalone}
\usepackage{tikz}

\begin{document}

  \begin{tikzpicture}
    \draw (-1,-1) -- (0,0)
      -- plot [id=x,domain=0.7:1.0] function {x};
  \end{tikzpicture}

\end{document}
```

pgfplotstodo.tex:716

pgfbug [open, Priority 5, Epic ‘]

external lib does not properly recompile unresolved references in external files, see <http://texwelt.de/wissen/fragen/7948/markierung-in-pgfplotlegende-fehlerhaft-ubernommen?Seite=1#7973>

pgfplotstodo.tex:752

pgfbug [open, Priority 5, Epic ‘]

When reading the manual v2.0 I found a typo 5.1 "Styling the nodes". Just after the first block of code, there is a sentence saying "... can achieve them. Once way is to use ..." which should be "One way is to use ..."

pgfplotstodo.tex:756

pgfbug [open, Priority 5, Epic ‘]

Beamer + pgf: the default template introduces a white line on top. Interestingly, it happens only for PGF CVS + beamer, but it appears to be dependent on third-party tools as well (see mail conversation with Stefan Tibus)

pgfplotstodo.tex:778

pgfbug [open, Priority 5, Epic ‘’]

When using externalize function together with a transform canvas, the result is somehow cropped. See this example, compare output with deactivated and activated externalize.

```
\documentclass{article}
\usepackage{tikz}
\usetikzlibrary{external}
\tikzexternalize % activate!
\begin{document}
\begin{tikzpicture}[transform canvas={scale=0.7}]
\node {root}
child {node {left}}
child {node {right}}
child {node {child}}
child {node {child}}
};
\end{tikzpicture}
A simple image is \tikz \fill (1,0) circle(5pt);.
\end{document}
```

pgfplotstodo.tex:835

pgfbug [open, Priority 5, Epic ‘’]

pgf users Vol 50 issue 6:

Hi,

Thanks for TikZ. I'm trying to use the externalization library with the class file gOMS2e.cls, which is provided for the journal Optimization Methods and Software. The class file and related files/documentation can be found here:

<http://www.tandf.co.uk/journals/authors/gomslatex.zip>

My problem is that the externalized figures are shifted up and to the left significantly, cutting them off. This problem does not occur when not using externalization.

This seems to be related to the problem discussed here:

http://sourceforge.net/tracker/index.php?func=detail&aid=3037831&group_id=142562&atid=7527

and may also be related to this one:

http://sourceforge.net/mailarchive/forum.php?thread_name=4C0F342B.5040008%40ins.uni-bonn.d

In the other cases, the solution was to use \tikzifexternalizing for whatever conflicts with the externalization, but it seems that I can't do this when my class file is the offending bit. Is this true? I would really like to be able to use the correct \documentclass to generate the figures so that the size/fonts/etc. are consistent

throughout the resulting document.

A minimal test example is included at the end of this message. It appears that the image is shifted ~1.25cm to the left and ~0.8cm up. The problem goes away when using `\documentclass{article}`.

I'm using the CVS version of pgf, and I get the same result when I produce postscript figures by using latex and setting

```
\tikzset{external/system call={
  latex \tikzexternalcheckshellescape -halt-on-error
-interaction=batchmode -jobname "\image" "\texsource";
  dvips -o "\image".ps "\image".dvi}}
```

```
%-----
\documentclass[printer]{gOMS2e}
\usepackage{tikz}
\usetikzlibrary{external}
\tikzexternalize
\begin{document}
\begin{center}
\begin{tikzpicture}
\draw[step=.5cm] (-3,-3) grid (3,3);
\draw[blue,line width=2mm] (-0.5,-3) -- (-0.5,1.2) -- (3,1.2);
\end{tikzpicture}
\end{center}
\end{document}
%-----
```

Any help would be appreciated; I'm afraid it's over my head at this point. Thanks!

pgfplotstodo.tex:874

pgfbug [open, Priority 5, Epic '']

some incompatibility

```
\documentclass{article}
\usepackage{german}
\usepackage[utf8]{inputenc} % erlaubt direkte Nutzung von Umlauten

\usepackage{pgfplots} % fuer plots

\usepackage{pgfplotstable} % fuer numeriktabellen
\usepackage{array,colortbl,booktabs}
\usetikzlibrary{external}
\tikzexternalize[force remake]

% DOESN'T WORK. Needs to disable externalization
\usepackage{vmargin}
\setpapersize{A4}
```

```

\setmarginsrb{2.5cm}{1cm}{2cm}{2cm}{8mm}{15mm}{5mm}{15mm}

\begin{document}

pgfplotstodo.tex:1296

Bug [open, Priority 5, Epic ‘’]

Using `\thisrow{col}` merely expands to the value, but does not implicitly add parenthesis around the value.

Consequently, something like `\thisrow{col}^2` will produce unexpected results for rows like `-2`

<http://tex.stackexchange.com/questions/262774/pgfmath-misbehaving-when-reading-negative-values-from-table-in-pgfplots>

However, textual columns should still be processed as usual. And: it used to work to write `\dimen0=\thisrow{col}pt` which would break if parenthesis is added automatically

Idea: something like

```
\def\thisrow#1{-2}
\let\thisrowX=\thisrow
\def\thisrow#1{(\thisrowX{#1})}%
\edef\XXX{\thisrow{col}^2}
\message{EXPANDED: \XXX^^J}
```

Bug [open, Priority 5, Epic ‘']
smithchart admittance graph has wrong sign

This Mail is in German, since your name suggests, that you speak German.
If that is not the case, please let me know, and I will write send you
this mail again in English.

Sehr geehrter Herr Feuersnger,

ich schreibe momentan meine Bachelor-Arbeit und muss dafr Antennen
vermessen und die Messergebnisse graphisch darstellen. Ich habe mit
Begeisterung festgestellt, dass ich mit PGFPlot recht direkt s1p- und
s2p-Dateien plotten kann.
Vielen Dank dafr!

Allerdings gibt es ein paar Darstellungsprobleme:

-> Bei Admitanzgraphen, also smithchart mirrored=true werden die
Koordinaten auf dem unteren Halbkreis mit negativen Vorzeichen
dargestellt (dies ist auch in dem Beispiel im Manual so)
Jedoch sind bei jedem Admitanz-Smith-Graph die Vorzeichen umgekehrt (da
der Admitanz-Graph per Definition $1/Z_L=1/(a+bi)=a/(a^2+b^2)-ib/(a^2+b^2)$)

Gibt es eine Option das einzurichten?
y dir=reverse
bewirkt nichts.

pgfplotstodo.tex:1403

Bug [open, Priority 5, Epic ‘']
smithcharts: -j Ab einer Gre von 14cm funktionieren yticklabel around circle,
few smithchart ticks

etc nicht mehr. Das lsst sich manuell hinbekommen:

```
\begin{smithchart}[  
title=\text{titel},  
smithchart mirrored=true,  
xticklabel shift=-19pt,  
grid style={blue},  
ticklabel style={blue},  
width=15.2cm,  
xtick={0.2,0.5,1,2,5},  
ytick={0,0.2,0.5,1,2,5,-0.2,-0.5,-1,-2,-5},  
xgrid each nth passes y={2},  
ygrid each nth passes x={2},%ytick align=center,

 get rid of this boolean “apply@datatrafo@”. It is a synonym for “is linear”. I would even say: apply the trafo to log axes as well, perhaps with no-op configuration
- pgfplotstodo.tex:1923 **Bug** [open, Priority 5, Epic ‘]
 REGRESSION:

```

\documentclass{article}
\usepackage{pgfplots}

\pgfplotsset{compat=newest}

\begin{document}
\begin{tikzpicture}
\begin{axis}[ybar,
symbolic x coords={foo,bar,baz},
x=2cm,
enlarge x limits={abs=bar}, xtick=data,
]
\addplot coordinates { (foo,1) (bar,3) (baz,2) };
\end{axis}
\end{tikzpicture}
\end{document}

```

 broke sometime between 1.6 (OK) and 1.7 (compile error).

 the problem is the definition of
`\pgfkeysdef{/pgfplots/@enlargelimits/abs value}` which attempts to decide if the argument contains a unit. If so, it skips the standard coordinate mapper. In this case, ‘abs=bar’ has no unit, but the math parser bails out because the argument is no math expression at all... how can I fix that!?

pgfplotstodo.tex:2001

Bug [open, Priority 5, Epic ‘]

combination of dateplot and x tick label as interval does not work well together:

- one can only format one of the dates
- the description applies to the *right* end rather than the left end

[see [bugtracker/minimal_1.pdf](#)]

Bug [open, Priority 5, Epic ‘]

extra ticks produce unwanted shifts of labels

I’m using pgfplots 1.10 and observe the following problem. The x label shifts down a bit if I introduce extra x ticks, even if their labels are empty. The following example produces the observed behavior:

```

\documentclass{standalone}
\usepackage{pgfplots}
\pgfplotsset{compat=newest}

\begin{document}

\begin{tikzpicture}
\begin{axis}[
width=4cm,
xlabel=Test,
axis x line=bottom,
axis y line=left,
]
\addplot [black] {x^2};
\end{axis}
\end{tikzpicture}

\begin{tikzpicture}
\begin{axis}[
width=4cm,
xlabel=Test,
axis x line=bottom,
axis y line=left,
extra x ticks={0},
extra x tick labels={},
]
\addplot [black] {x^2};
\end{axis}
\end{tikzpicture}

\end{document}

```

It does not happen with the old, static, label placement (e. g. if I remove the compat setting). I was not able to test with 1.11, but there’s nothing related mentioned in the release notes, if I did not overlook it. Any ideas what I’m missing or if it is a bug and how to work around it? I need two adjacent graphs in subfloats but only one of them has extra ticks, so the spacing should be equal to look reasonable. Adding an extra tick on the other plot helps, but the spacing looks better without, so that’s not an option. And switching back to the old behavior means manually tweaking the distance, what makes no sense to me either.

root cause: `\pgfplots@ticklabel@maxtickdimen@finish` is called twice: once for the normal ticks and once for the extra ticks (note that the `*reset` routine is invoked just once). However, the `@finish` routine adds some `@extrashift` – and that is done twice as well. The extra shift belongs to the tick offset

`pgfplotstodo.tex:2191` **Bug** [open, Priority 5, Epic ‘’]
composed plot handlers (hist, boxplot, contour) need access to coordinate filters etc. during their first survey phase

 copy paste from the manual does not copy empty lines — which is quite bad for the 3d surface examples

This appears to be a known issue for pdf, with few available work-arounds. The listings package suffers from it as well (at least regarding trailing spaces/tabs); there are a couple of related questions at tex.sx

A way might be to use `\usepackage{accsupp}` with something like

```
\documentclass{article}

\usepackage{accsupp}

\begin{document}
\long\def\XXX{A
^^J
  ^^J
B}
\BeginAccSupp[method=escape,ActualText=\XXX]
First line

second line
\EndAccSupp{}

\end{document}
```

Expected result: copy-pasting that segment should yield A (newline) B. But it does not work with newlines as it seems

One entry on tex.sx mentioned that Microsoft products can insert empty lines in copy-paste output (suggested solutions there was to generate such a pdf and include it as graphics unless I am mistaken)

I managed to get this up and running so far – but the result is unusable! both acrobat and xpdf get utterly confused unless one hits exactly on some invisible lines [[see bugtracker/minimal_2.pdf](#)]

```
\pdfcompresslevel=0
\documentclass{article}
\usepackage{pgfplots}
\usepackage{accsupp}
\pgfplotsset{compat=1.7}

Problems here:

- one has to mark the right segments, and these can only be found by trial and error
- hitting the wrong one will copy nothing or only parts
- in the manual, I often had the wrong content in my clipboard (some older state of the clipboard, no idea where that came from)

pgfplotstodo.tex:3781

Bug [open, Priority 5, Epic ‘]

<http://groups.google.at/group/comp.text.tex/msg/adcb1d071c2cba40>

If I use a `yshift` in a scope to draw two graphs superimposed, the x label in the second plot (the one in the `yshift` scope) is not positioned correctly. I need to manually add another `yshift`, with the same value in the opposite direction, to get the label at the correct place. This happens if the `axis x line = middle` option is used. Without that option, the x label is positioned correctly. Example follows: [\[see bugtracker/minimal_5.pdf\]](#)

```

\documentclass{article}

\usepackage{pgfplots}

\pgfplotsset{compat=1.3}

\begin{document}

\begin{tikzpicture}
\begin{axis}[width=10cm,height=3cm,xlabel={x}]
\addplot coordinates {
(0,1) (1,-1) (2,1)
};
\end{axis}
\begin{scope}[yshift=-3cm]
\begin{axis}[width=10cm,height=3cm,xlabel={x},
axis x line = middle]
\addplot coordinates {
(0,1) (1,-1) (2,1)
};
\end{axis}
\end{scope}
\end{tikzpicture}
\end{document}

```

Using `xlabel style = {yshift=3cm}` in the second plot will correctly position the x label (to its default position).

Gab

 groupplots + extra braces or foreach are incompatible.
- pgfplotstodo.tex:4044 **Bug** [open, Priority 5, Epic ‘’]
 numplotsper type and forget plot and ybar interval yields errors.
- pgfplotstodo.tex:4050 **Bug** [open, Priority 5, Epic ‘’]
 expression plotting and empty 'y' results in errors. Perhaps it would be better to handle that explicitly somehow? (occurs for hist when one input line is empty)
- pgfplotstodo.tex:4070 **Bug** [open, Priority 5, Epic ‘’]
 /pgfplots/samples at and /tikz/samples at work on the same axe. Tantau says that this key support foreach statement and thus the dots notation. However, when I want to use two or more different dots notation within pgfplots, latex crashes ! Here is an example which clarify this issue :
`\addplot+[mark=none,variable={\t}, samples at = {\foreach \x in {0,10,...,180,200,...340}`
- pgfplotstodo.tex:4080 **Bug** [open, Priority 5, Epic ‘’]
 groupplots: mixing 2d/3d in one groupplot doesn't reset 'zmin,zmax' ?
- pgfplotstodo.tex:4101 **Bug** [open, Priority 5, Epic ‘’]
 3D axes: it is difficult to get an 1:1 correspondence to tikz.
- pgfplotstodo.tex:4117 **Bug** [open, Priority 5, Epic ‘’]
 3D axis: provide support for manual axis configuration, - depth (n vector), - foreground/background, - tick label axes, - ...

- pgfplotstodo.tex:4146 **Bug** [open, Priority 5, Epic ‘’]
plot graphics: `\ref` legend doesn’t work properly
- pgfplotstodo.tex:4167 **Bug** [open, Priority 5, Epic ‘’]
ternary axes: the ‘marker clipping’ doesn’t work (naturally)
- pgfplotstodo.tex:4177 **Bug** [open, Priority 5, Epic ‘’]
polar axes:
- ✓is wrong since ‘near ticklabel’ anchor uses `pointunitx` which is not correctly initialised for polar axes.
 - axis equal
 - ✓data scaling needs to be disabled for X axis.
 - ✓auto tick labels work only for the case of `disabledatascaling`
- pgfplotstodo.tex:4182 **Bug** [open, Priority 5, Epic ‘’]
contour: the `table/meta=2` default is wrong.
- pgfplotstodo.tex:4195 **Bug** [open, Priority 5, Epic ‘’]
dimension too large sanity checking: TeX uses the maximum value instead. Perhaps that can be checked?
- pgfplotstodo.tex:4231 **Bug** [open, Priority 5, Epic ‘’]
the quiver/scale arrows thing might need an “auto” option. If I don’t add it now, it’ll probably never work in the future.
- pgfplotstodo.tex:4236 **Bug** [open, Priority 5, Epic ‘’]
‘1.23456e4;’ in a log plot resulted in hard-to-read error messages. Improve sanity checking here.

- pgfplotstodo.tex:4255 **Bug** [open, Priority 5, Epic ‘Usability’]
 avoid dimension too large errors which occur due to a data range restrictions.
 Example: data range = 0:6000 view range = 0:1 \rightsquigarrow results in error. But that’s
 easy to detect! Just compute the point coordinate in float (after the scaling is
 complete). Then, install a filter somewhere. perhaps an ”a posteriori” filter in
 the pointxyz command?
- DUPLICATE: the nasty dimension-to-large message could probably be
 avoided if pgfplots would simply clip the results to TeX’s range
- pgfplotstodo.tex:4269 **Bug** [open, Priority 5, Epic ‘’]
 |yticklabels={<list>},extra y ticks=...— is incompatible since the extra
 ticks share the same tick typesetting routine (which, in turn, queries the |list_i).
- pgfplotstodo.tex:4283 **Bug** [open, Priority 5, Epic ‘’]
 The ’text depth’ in legend entries is incompatible with ’text width’. The
 problem: text width is implemented using `\begin{minipage}[t]` so its
 contents is all in the depth. Setting text depths overrides the height!
- pgfplotstodo.tex:4293 **Bug** [open, Priority 5, Epic ‘’]
 one can’t provide ’disable log filter’ to addplot (but it might be interesting)
- pgfplotstodo.tex:4297 **Bug** [open, Priority 5, Epic ‘’]
 FPU: atan doesn’t check for unbounded inputs.
- pgfplotstodo.tex:4302 **Bug** [open, Priority 5, Epic ‘’]
 unbounded inputs: improve warning messages: they should not contain low
 level FPU args.
- pgfplotstodo.tex:4308 **Bug** [open, Priority 5, Epic ‘’]
 the user interface to set ’tickwidth=0’ for a SINGLE axis is not very good: it
 seems one needs ’xtick style=/pgfplots/tickwidth=0’ to do so... \rightsquigarrow can be
 solved if tickwidth has a family, I guess. Something like ’draw’ which will not
 be pulled by pgfplots. But then remains a problem of key paths.

pgfplotstodo.tex:4316

Bug [open, Priority 5, Epic ‘’]

I have seen that 'plot table' with very large files can produce pool size problems – even if the coordinates are all filtered away. In other words: the code can't simply read a file and throw its contents away. The problem appears to be some math parsing using the table/x expr and friends. 'pool size = names of control sequences and file name' \rightsquigarrow the math parser could be improved with ifcurname

pgfplotstodo.tex:4331

Bug [open, Priority 5, Epic ‘’]

providing zmin/xmax to an axis activates 3D mode, ok – but lower dimensional input routines appear to fail.

pgfplotstodo.tex:4335

Bug [open, Priority 5, Epic ‘’]

one can't provide 'scale' as argument to a (3d) axis

pgfplotstodo.tex:4344

Bug [open, Priority 5, Epic ‘’]

it may still happen that log-axes get only *one* tick label (in my case $10^{-0.2}$). That should never happen. The range is about $y_{\min}=4.7e-1$, $y_{\max}=9.5e-1$

pgfplotstodo.tex:4348

Bug [open, Priority 5, Epic ‘’]

log samples in plot expression for 3D plots

pgfplotstodo.tex:4352

Bug [open, Priority 5, Epic ‘’]

different log bases and gnuplot

pgfplotstodo.tex:4366

Bug [open, Priority 5, Epic ‘’]

I tried placing a named coordinate inside one axis and using it in another. It failed.

CF: The axis is drawn inside of its own picture which will only be shifted if everything has been drawn. That will be the origin of this problem I guess

Miraculously I can use the coordinate outside axis env. So I have reached the following solution:

- pgfplotstodo.tex:4372 **Bug** [open, Priority 5, Epic ‘] plot coordinates doesn’t check too well if 1. addplot3 is used but only two coords are given 2. addplot is given but three coordinates are provided (also for plot expression)
- pgfplotstodo.tex:4385 **Bug** [open, Priority 5, Epic ‘] the compat things are not yet complete: I wanted to check when it is really necessary (for example if ‘x dir’ is used)
- pgfplotstodo.tex:4390 **Bug** [open, Priority 5, Epic ‘] the nodes near coords feature produces unexpected results when used together with markers \rightsquigarrow this is due to the default configuration of scatter plots.
- pgfplotstodo.tex:4401 **Bug** [open, Priority 5, Epic ‘] the ybar style won’t be set inside of `\label{}`
- pgfplotstodo.tex:4406 **Bug** [open, Priority 5, Epic ‘] axis equal for semilog plots is not correct (?)
- pgfplotstodo.tex:4414 **Bug** [open, Priority 5, Epic ‘] backwards compatibility problem: axis descriptions can’t contain `/pgfplots/` styles any longer! This is a key path issue :-)
- pgfplotstodo.tex:4419 **Bug** [open, Priority 5, Epic ‘] BUG: in empty axes, `'xtick=\empty'` is ignored.
- pgfplotstodo.tex:4436 **Bug** [open, Priority 5, Epic ‘] The automatic tick labeling sometimes produces inconsistent or confusing labels: 1. engineering and fixed number style are mixed up. 2. If range of an axis is so small that the labels differ only on the third decimal, still only two decimals are used.
- pgfplotstodo.tex:4451 **Bug** [open, Priority 5, Epic ‘] 3D: error bars and stacked plots need to be updated.
- Is this still current? There has been a major revision some time ago...

pgfplotstodo.tex:4489

Bug [open, Priority 5, Epic ‘’]

addplot3 vs addplot:

3D: the use of `\addplot3` and `\addplot` is not sanitized properly

Possibilities:

- used `\addplot` when `\addplot3` should have been used
- used `\addplot3` where `\addplot` should have been used.

What can happen here!? Shouldn't this work in every case?

- The "xtick" value is not applied unless there is a coordinate in the x range:
\$`\leadsto`\$ that's the handling of empty figures...

not working:

```
\begin{axis}[xtick=0]
\end{axis}
```

not working:

```
\begin{axis}[xmin=-5,xmax=5,xtick=0]
\end{axis}
```

not working:

```
\begin{axis}[xmin=-5,xmax=5,xtick=0]
\addplot coordinates { (-10, 0) };
\end{axis}
```

working:

```
\begin{axis}[xmin=-5,xmax=5,xtick=0]
\addplot coordinates { (0, 0) };
\end{axis}
```

pgfplotstodo.tex:2822

Bug [open, Priority 4, Epic ‘’]

adding a post action with decoration to a pgfplots style results in an error if markers are active

pgfplotstodo.tex:2015

Bug [open, Priority 3, Epic ‘’]

TikZ wastes time during its point evaluations (i.e. expressions of sorts $(1,2)$): it calls `tikz@checkunit` in order to check for units and throws the math result away (and computes it again afterwards).

pgfplotstodo.tex:2313

Bug [open, Priority 3, Epic ‘’]

contour plot handler does not allow 'name path'.

pgfplotstodo.tex:2774

Bug [open, Priority 3, Epic ‘’]

fill between: `soft clip={domain=1:2}` might fail if the function in question touches the y boundary within the domain. In this case, the soft clip path produces unwanted side-effects.

Cure: enlarge the soft clip path generated by `domain`. It should be bigger than the function in question (with respect to y)

(I have a not-quite-minimal example in my tmp folder)

pgfplotstodo.tex:2883

Bug [open, Priority 3, Epic ‘]

Usability issues around histograms: <http://tex.stackexchange.com/questions/151411/histogram-frequentation-polygon/151551#151551>

[see [bugtracker/minimal_6.pdf](#)]

```
\documentclass{standalone}
\usepackage{tikz}
\usetikzlibrary{calc,intersections,through,backgrounds,snakes}
\usepackage{pgfplots}
\pgfplotsset{compat=1.8}
\usepgfplotslibrary{statistics}
\begin{document}
\begin{tikzpicture}
\begin{axis}[
width=1*\textwidth,
height=8cm,
ymin=0,
ymax=7,
title=Histogram lichaamslengte,
ybar interval,
xticklabel={[\pgfmathprintnumber\tick--\pgfmathprintnumber\nexttick []],
\addplot+[hist={bins=4, data max=12,data min=0}]
table[row sep=\\,y index=0] {
data\\
1\\ 2\\ 1\\ 5\\ 4\\ 10\\ 4\\ 5\\ 7\\ 10\\ 9\\ 8\\ 9\\ 9\\ 11\\
};

\addplot[
%
% there seems to be a bug in pgfplots which would shift the two
% 'hist' plots as if both were bar plots.
% This is one possible work-around:
forget plot,
%
mark=*,
hist={bins=4, data max=12,data min=0,
% this here should *not* become an ybar interval:
handler/.style={sharp plot},intervals=false,
},
%
% .. but since the other plot is shown with intervals, we should
% shift this here accordingly:
shift={(axis direction cs:1.5,0)},
]
table[row sep=\\,y index=0] {
data\\
1\\ 2\\ 1\\ 5\\ 4\\ 10\\ 4\\ 5\\ 7\\ 10\\ 9\\ 8\\ 9\\ 9\\ 11\\
};
\end{axis}
\end{tikzpicture}
\end{document}
```

Problems:

- point meta uses the wrong values (try out nodes near coords)
- ybar interval is active for the second plot
- interval=false should be deduced automatically

The following fails to compile with lualatex (due to the double quotes apparently). It works in pdflatex

Low prio because the point meta is not actually used – and if it is used correctly, it works in both lualatex and pdflatex

```
\documentclass{standalone}
\usepackage{pgfplots}
\pgfplotsset{%
  compat=newest,
}
\begin{document}
\begin{tikzpicture}
\begin{axis}[
  %point meta=explicit symbolic,
  %nodes near coords=\pgfplotspointmeta,
]
\addplot table[x index={1}, y expr=\coordindex, header=false, meta index={0}] {
"i" 62.099
"i" 62.046
"i" 56.304
"i" -44.258
"2" -28.826
"i" 18.740
"i" -14.653
"i" 14.402
"i" -12.907
"i" 12.295
};
\end{axis}
\end{tikzpicture}
\end{document}
```

pgfplotstodo.tex:1773

Bug [open, Priority 2, Epic ‘’]

It seems that quiver combined with every arrow and `-{Latex[width=2pt]}` produces some unwanted side effect:

it produces entirely different output than without the arrow spec

```
\documentclass{standalone}
\usepackage{pgfplots}
\pgfplotsset{compat=1.11}
\usetikzlibrary{arrows.meta}
\begin{document}
\begin{tikzpicture}
```

```

\begin{axis}[domain=-3:3, view={0}{90}]
\addplot3[blue,
point meta=x,
quiver={
u=-x,
v=-y},
scale arrows=0.085,
every arrow/.append style={%
-Latex[width=2pt]},
%arrows=-{Latex[width=2pt,length=3pt]}},
},
},
samples=21,
]
{0};
\end{axis}
\end{tikzpicture}

\end{document}

```

pgfplotstodo.tex:2705

Bug [open, Priority 2, Epic ‘']
context + color mix produces spurious shifts

I’m using pgfplots to create some bar charts with error bars in ConTeXt, and I want to use custom colours for them. This works, but if I mix a custom colour with another colour, it results in a gap between the error bar line and the error bar mark. If two custom colours are mixed, the gap seems to be doubled. Mixing with predefined colours works normally. MWE:

```

\usemodule[tikz]
\usemodule[pgfplots]

\definecolor [Blue] [h=3465a4]
\definecolor [White] [h=ffffff]

\pgfplotsset{compat=newest}

\starttext
\starttikzpicture
\startaxis[ybar, error bars/y dir=both, error bars/y explicit]
\addplot+[blue!50!white] coordinates {(1,5) +- (0,3)};
\addplot+[Blue] coordinates {(1,5) +- (0,3)};
\addplot+[Blue!50!white] coordinates {(1,5) +- (0,3)};
\addplot+[Blue!50!White] coordinates {(1,5) +- (0,3)};
\stopaxis

```

```
\stoptikzpicture
\stoptext
```

Here you can see the result:

 contour plot handler does not allow to specify draw and fill – which might be useful if just one contour is drawn/filled
- pgfplotstodo.tex:2897 **Bug** [open, Priority 1, Epic ‘’]
 The special feature
`patch,patch type=quadratic spline, point meta=none` which produces global paths appears to duplicate the low level path. I suppose this can only be seen in the resulting pdf file or in a debugger, but it makes a big difference when used together with decorations or fill between.
 This feature should be documented in more places as well.
 FOUND IT: the problem is stated incorrectly: the path is generated once (and only once). BUT: `\tikz@mode` is invoked twice, once by the mesh plot handler and once by tikz. This is idempotent, in general – but not if we have `name path=A` in place! In this case, the softpath will be *appended* every time `\tikz@mode` is being executed.
 INACTIVE: at the time of this writing, the offending “append” feature of `name path` is inactive; this bug does not happen anymore
- pgfplotstodo.tex:2922 **Bug** [open, Priority 1, Epic ‘’]
`|\usepackage[gray]{xcolor}` does not seem to work as good as for cmyk... in particular, the default color map is not being converted correctly!?
 Probably because xcolor does not convert the colors if they are RGB
 This appears to be irrelevant because RGB gray colors can be translated losslessly to scalar gray values!?
- pgfplotstodo.tex:3239 **Bug** [open, Priority 1, Epic ‘’]
 Internal coordmath framework: it is not used everywhere
- pgfplotstodo.tex:3263 **Bug** [open, Priority 1, Epic ‘’]
`|\lognumber` format code— is a global variable and cannot be set for individual axes.

This applies to log ticks with fixed point as well.

pgfplotstodo.tex:3565

Bug [open, Priority 1, Epic ‘]

CRASH: [see [bugtracker/minimal_9.pdf](#)]

```
\begin{tikzpicture}
  \begin{axis}[
    scale mode=scale uniformly,
    x={(1pt,0pt)},
    y={(-0.5pt,0.5pt)},
    z={(0pt,1pt)},
  ]

  % addplot3 works (with 3d coords):
  \addplot coordinates {
    (0,0) (1,0) (0,1)
  };

  \end{axis}
\end{tikzpicture}
```

pgfplotstodo.tex:3610

Bug [open, Priority 1, Epic ‘]

Using 0 in pgfplots coordinate systems does not necessarily mean “no offset”.

This is misleading. Bug sourceforge #3168030: [see

[bugtracker/minimal_10.pdf](#)]

 javascript: incompatibility with external library: 1. filenames: `\jobname` contains characters with incompatible catcodes and that funny `insdljs` package tries to assemble macros with these characters. \rightsquigarrow fixed; I simply use `pgfplotsJS` as temporary file name. 2. the images as such have corrupted forms \rightsquigarrow Can be fixed if `\usepackage{eforms}` is used BEFORE loading `pgf`. The reason: `\begin{Form}` and the shipout-hackery of the `pgf` externalization bite each other. `\begin{Form}` must come before the shipout hackery of `pgf`. 3. `\includegraphics` does not preserve PDF forms.
- pgfplotstodo.tex:4584 **Bug** [open, Priority 1, Epic ‘’]
 the interrupt bounding box feature should still update the data bounding box. Otherwise, transformations may fail.

6 Feature Proposals PGFPlots

pgfplotstodo.tex:5122

Bug [open, Priority 5, Epic ‘]

Unbounded point meta data should be filtered out.

<http://tex.stackexchange.com/questions/164250/pgfplots-surf-plot-dont-draw-nan?lq=1>

However, it seems as if this “filter out” should not be done as for coordinates (which would filter out all adjacent patch segments). It should merely filter out the current one.

pgfplotstodo.tex:7055

Feature Proposal [open, Priority 6, Epic ‘]

It is certainly possible to write some sort of CELL-BASED ‘mesh/surf’ shader - a combination of ‘flat corner’ and cell based rectangles:

... perhaps combined with a matrix-like input file as in
<http://tex.stackexchange.com/questions/123719/drawing-a-large-binary-matrix-as-colored-grid-in-tikz>

imagesc

<http://tex.stackexchange.com/questions/255596/imagesc-in-tikz-with-non-symmetric-matrices-and-squared-axis>

<http://tex.stackexchange.com/questions/124276/matlab2tikz-imagesc-tikz-pgfplots-equivalent>

<http://tex.stackexchange.com/questions/255432/plotting-matrix-image-data?lq=1>

<http://tex.stackexchange.com/questions/154051/table-vs-plot-how-to-print-table-of-values-with-colors-representing-values?lq=1>

- every coordinate denotes a CELL instead of a corner,
- the “shader” maps the cdata into the colormap to determine the cell color
- details?
 - to get well-defined cells, I have to enforce either a non-parametric lattice grid or do a LOT of additional operations (?).
 - alternative: define N*M cells by N+1 * M+1 points.
 - perhaps a combination of both? \rightsquigarrow that’s more or less the same as ‘flat mean’ up to the further row/column pair
- it would be generally useful to have an “interval” or “cell” mode: the idea is that every input coordinate defines an interval (1d) or a cell (2d).

To define the last cell, one needs to add one "mesh width" somehow. I just don't know where:

- the artificial cell should be processed with the normal streams - including limit updates, stacking etc.
- the artificial cell needs to know when the end-of-stream occurs. For 1d plots, that may be possible. For 2D plots, this information requires a valid 'cols' key.
- I suppose it would be best to patch @stream@coord.. at least for the 'cell' mode.
- Idea:
 - * the `\pgfplots@coord@stream@coord` implementation realizes the cell-mode: after every 'cols' coordinate, a further one is replicated. This needs the "last mesh width". Furthermore, it needs to accumulate a row vector, the "last row". This last row is need during `stream@end` to replicate the further row:
 - * the `\pgfplots@coord@stream@end` implementation has to realize the last step of cell mode: the replication of a further row. It also has to realize the implementation of 'interval' mode (replication of last coordinate). My idea is to simply use an `applist` for this row accumulation. The format should be compatible with `\pgfplots@coord@stream@foreach@NORMALIZED`. That doesn't produce problems, even when the end command is invoked within a `foreach@NORMALIZED` loop - because the loop has already ended.

pgfplotstodo.tex:4618

Feature Proposal [open, Priority 5, Epic '']

implement `colormap access=piecewise constant` according to suggestions of Stefan Pinnow

- point meta is mapped using piecewise constant interpolation
- in order to allow resampling of colormaps: add something like `colormap={new}{samples of colormap={colormap name=<name>, samples=10}}`. Useful options are
 - `samples`
 - `samples at`
 - `colormap name`
 - `colormap`
 - `colormap access (?)`

or better:

```

colormap={new sampled}{colors of colormap={0,100,...,1000} of <name>}},
colormap={new sampled2}{samples of colormap={10} of <name>}},
colormap={new indexed}{indices of colormap={0,4,8,9} of <name>}},

```

pgfplotstodo.tex:4624 **Feature Proposal** [open, Priority 5, Epic ‘]

add non-uniform colormaps

particularly useful for colormap access=piecewise constant

pgfplotstodo.tex:4630 **Feature Proposal** [open, Priority 5, Epic ‘]

add open-ended colorbars, preferably by adding < and > as prefixes for the first resp. last tick labels in the colorbar

see email of Stefan Pinnow of Dec 31, 2015

Feature Proposal [open, Priority 5, Epic ‘]

implement special math formulas for cube roots

<http://tex.stackexchange.com/questions/69411/pgfplots-cant-plot-some-usual-mathematical-functions>. More generally: solve

$$y(x) = x^{1/n}$$

for odd n and negative x : in this case, it holds that

$$y(x) = -|x|^{1/n}$$

also implement feature requests to PGF with gamma function etc

<http://tex.stackexchange.com/questions/281865/part-of-function-domain-omitted-using-pgfplots>

pgfplotstodo.tex:4804

Feature Proposal [open, Priority 5, Epic ‘]

allow a simple way to connect coordinates of different axes, i.e. something like `(axis1 cs:1,1) -- (axis 2 cs:3,4)` (Tim Esser, per Mail Apr. 28, 2015)

pgfplotstodo.tex:4808

Feature Proposal [open, Priority 5, Epic ‘]

add enlarge limits=to next tick label, see <http://tex.stackexchange.com/questions/229551/enlarge-limits-to-nearest-tick>

pgfplotstodo.tex:4841

Feature Proposal [open, Priority 5, Epic ‘]

allow # inside of inline tables: the following does not work in any pgfplots version:

```
\documentclass{standalone}
\usepackage{pgfplots}
\pgfplotsset{%
    compat=newest,
}
\begin{document}
\begin{tikzpicture}
\begin{axis}[
    % point meta=explicit symbolic,
]
\addplot table[x index={1}, y expr=\coordindex, header=false, meta index={0}] {
#Re 750 K
"i" 62.099
"i" 62.046
"i" 56.304
"i" -44.258
"2" -28.826
"i" 18.740
"i" -14.653
"i" 14.402
"i" -12.907
"i" 12.295
};
\end{axis}
\end{tikzpicture}
\end{document}
```

pgfplotstodo.tex:4851

Feature Proposal [open, Priority 5, Epic ‘]

write a script which applies the entire “release todo” over night:

- clone into tmp repo, compile manual from scratch with latest PGF
- clone into different tmp repo, compile tests against latest PGF
- same for all supported PGF versions
- improve reporting somehow (log files and summaries somewhere)

pgfplotstodo.tex:5012 **Feature Proposal** [open, Priority 5, Epic ‘']
improve the outcome of `log ticks with fixed point` if the data range is of
order $O(1)$.

Hi Benjamin Voigt,

thanks for the detailed email!

A appreciate the level of detail for this feature request, and I am glad that my package p

You asked for preferences: if possible, I always prefer reduced (optimally: minimal) exampl

The feature request(s) are, of course, closely related. The overall theme is "improve log t

I believe I understand most of them, although I would need to think through it more carefu

First, let me make some small comments.

1. I believe the requirement list for an algorithm which chooses tick positions + labels is

- generate tick labels automatically
- make it clear that they are in log format
- ensure that there are enough tick labels to fill the axis
- the algorithm has to work reasonably on *every* possible order of magnitude
- ensure that the tick labels have some commonly recognized form

You see that I made rather abstract formulations. The current implementation in pgfplots works with $10^{-3}, 10^{-2}, 10^{-1}, 10^0, 10^1, 10^2, 10^3, 10^4, 10^5, 10^6$ addresses these issues using the standard exponential notation.

Why do I say that? Well, improving the quality of log ticks with fixed point for $O(1)$ numbers

2. This is really just a side note: you may want to take a look at the existing key "log ticks" in the pgfplots manual. There is also some tick fine tuning in section "4.15.4 Tick Fine-Tuning" (the number may vary)

3. The current tick placement algorithm has no predefined lists of real numbers. It operates on a list of real numbers

My current priorities in the development of pgfplots are as follows:
Release 1.11 is the current public stable.

Release 1.12 will have the theme "scalability and performance". It will come with a new batch interface

Release 1.13 (or whatever it will be called) will probably become a feature release to add new features

I typically take six months per release; and 1.12 is planned for end of this year. That means I will be working on 1.13

The effort as such is probably quite low; it's just that I have to make a strong focus to improve the quality of the code

In other words: if you are willing to invest time on this special project, I would be willing to accept your suggestions

Entry points would be <http://tex.stackexchange.com/questions/12668/where-do-i-start-latex-plotting>

I will copy this email to my todo list (I assume your suggestions and thoughts in this mail)

What do you think?

Kind regards

Christian

PS

Your name sounds like German origins - or some other European country. Do you come from here?

fillbetween: accept soft `path={inner x range}` or something like that,
compare http://tex.stackexchange.com/questions/180127/stacking-plots-in-animation-using-fill-between-library-with-dynamic-calculation/180299?noredirect=1#comment416484_180299

pgfplotstodo.tex:5093

Feature Proposal [open, Priority 5, Epic ‘]

allow predicates styles of sorts `every intersection below y={0}` or, even better: `every lower intersection segment` – after all, “upper” and “lower” can be identified by means of scalar productions with same directed vector. The directed vector can be plugged in from the axis → think about solutions

see http://tex.stackexchange.com/questions/207042/pgfplots-addplot-color-depending-on-sign/207157#comment535403_207157

pgfplotstodo.tex:5109

Feature Proposal [open, Priority 5, Epic ‘]

ich bin es nochmal. Ich habe nochmal eine Anmerkung zu den decorations. Ich bin gerade dabei, meine Plots mit Pfeilen zu versehen wie ich es in dem Bild zuvor bereits getan habe. Leider kann ich fr die decorations nur folgende Angabe machen:

```
mark = at position 0.15 with {\arrow [scale=1]{stealth}},
```

Jedoch kommt es bei Kurven hufiger vor, dass ich nicht gut abschätzen kann, ob es sich dabei um Position 0.1 oder 0.15 oder dergleichen handelt. Ich habe es so verstanden, dass der Compiler die Strecke der Kurve vermisst und bei bspw.

```
mark = at position 0.5 with {\arrow [scale=1]{stealth}},
```

eine Dekoration bei der Hlfte der Kurve macht. Doch wo ist die Hlfte der Kurve, wenn diese gekrmmt und gewunden ist? Nun ist es umstndlich immer diese Dekorationen anzupassen und ich wrde lieber eine x oder y Koordinate verwenden und sagen knnen:

```
mark = at x position 40 with {\arrow [scale=1]{stealth}},
```

So kann ich mir sicher sein, dass der Pfeil dann der x-Koordinate 40 zugeordnet wird und auf der Kurve landet.

pgfplotstodo.tex:5113

Feature Proposal [open, Priority 5, Epic ‘]

Implement something like `pos={x=40}`

pgfplotstodo.tex:5129

Feature Proposal [open, Priority 5, Epic ‘]

addplot graphics: support “scale to natural dimensions” of the input graphics

there is a half-ready solution in

<http://tex.stackexchange.com/questions/175618/>

[addplot-graphics-maintaining-images-aspect-ratio-despite-different-scaling-of/175726#175726](http://tex.stackexchange.com/questions/175618/addplot-graphics-maintaining-images-aspect-ratio-despite-different-scaling-of/175726#175726)

pgfplotstodo.tex:5202

Feature Proposal [open, Priority 5, Epic ‘Usability’]

The distinction into survey phase and visualization phase is technically reasonable, but causes confusion.

Is there a way to simplify loop operations during the survey phase as in

<http://tex.stackexchange.com/questions/172917/>

[pgfplots-and-using-axis-cs-to-add-points](http://tex.stackexchange.com/questions/172917/pgfplots-and-using-axis-cs-to-add-points) ?

pgfplotstodo.tex:5212

Feature Proposal [open, Priority 5, Epic ‘Usability’]

Pgfplots requires user input to distinguish between parameterized 3d plots and matrix-like 3d plots.

Why can't PGFPlots determine automatically if `z buffer=sort` is adequate?

<http://tex.stackexchange.com/questions/172753/pgfplots-and-gnuplot-with-addplot3>

ATTENTION: what about 3d sampled line plots!? this would break with `z buffer sort`.

pgfplotstodo.tex:5242

Feature Proposal [open, Priority 5, Epic ‘Usability’]

pgfplots math expressions always yield internal FPU formats which confuses users.

Return SCI representation instead.

TO BE CLARIFIED: which operations should be replaced? REplacing ‘`x filter`’ and its friends might actually make things worse because FPU functions will no longer accept the argument.

It might be useful to improve the FPU such that `declarefunction` for a function which does *not* expect FPU arguments accept it.

This could be done by patching `\pgfmath@stack@push@operation` - and check if the argument is a function and that function has a known FPU implementation (its float-backup exists). If not: generate a dummy which converts to fixed points. Use the function's arity!

see

<http://tex.stackexchange.com/questions/171263/plotting-a-function-defined-with-pgfmathdecl>

see

<http://texwelt.de/wissen/fragen/3960/fraktale-mit-pgfplots?Seite=1#3993>

I started to work on a solution for the second one, see the uncommented call to `\pgfplots@expression@normalize@floats`

pgfplotstodo.tex:5267

Feature Proposal [open, Priority 5, Epic ‘’]

bullet graphs:

<http://tex.stackexchange.com/questions/146538/how-to-create-vertical-bullet-graphs-with-pstricks>

Inspiration:

<http://img35.imageshack.us/img35/1061/snap2134.png>

I started a prototype. To do items:

- make sure that color schemes can be exchanged in a simple way
- prepare the package for up to 3 discriminative markers
- regarding data files: TO CLARIFY

branch ‘bulletplots’

perhaps this would be a good contribution together with
<http://tex.stackexchange.com/questions/29293/is-there-a-package-that-provides-graphing-in-the-style-of-ed-tufte/29311#29311>

pgfplotstodo.tex:5273

Feature Proposal [open, Priority 5, Epic ‘’]

Given some PGF point, allow to access the high-level coordinates.

see <http://tex.stackexchange.com/questions/174404/convert-unit-to-coordinate-works-for-x-coordinate-but-not-for-y-coordinate/174443#174443> for a use-case and note that there is a work-around which works for ‘pin’ in the pgfplots manual - and that is awkward.

pgfplotstodo.tex:5279

Feature Proposal [open, Priority 5, Epic ‘’]

add “stackable tick labels” (tick labels with vertical shifts if they are too close).

compare <http://tex.stackexchange.com/questions/164673/positioning-even-or-odd-x-axis-tick-labels-in-pgfplots>

pgfplotstodo.tex:5314

Feature Proposal [open, Priority 5, Epic ‘’]

suppress tick-line cross in 3d for view directions in which the cross degenerates to a very thick line

compare

```
\documentclass[tikz,12pt]{standalone}
\usepackage{tikz,pgfplots,pgfplotstable}

\pgfplotsset{compat=1.10}

\pgfplotsset{every axis/.append style={tick style={line width=0.7pt}}}
```

```

\pgfplotstableread{
a b
-0.1 0.2
0.1 0.5
}\testdata

\begin{document}
\foreach \h in {5,10,...,360} {
\begin{tikzpicture}

\begin{axis}[title=\h,axis lines=center, ymin=-0.22,ymax=0.22, xmin=-0.2,xmax=0.2,xlabel=x
\addplot3 [color=blue,] table[x expr=0,y=a,z=b] {\testdata};
\end{axis}

\end{tikzpicture}
\par
}

\end{document}

```

pgfplotstodo.tex:5331 **Feature Proposal** [open, Priority 5, Epic ‘’]
Tufte-style range frames for 3d <http://tex.stackexchange.com/questions/165766/tufte-style-range-frames-for-three-dimensional-plots>

pgfplotstodo.tex:5337 **Feature Proposal** [open, Priority 5, Epic ‘’]
Add option of sorts “shift along outer normal vector of current axis” while generating paths for axes, ticks, tick labels, and perhaps even grid lines.

<http://tex.stackexchange.com/questions/165766/tufte-style-range-frames-for-three-dimensional-plots>

pgfplotstodo.tex:5347 **Feature Proposal** [open, Priority 5, Epic ‘’]
Allow to shift (x) tick labels vertically if they are too dense.

Sometimes one needs lots of tick labels. It would be cool if every second would be shifted vertically, perhaps with an edge to the original location

pgfplotstodo.tex:5385 **Feature Proposal** [open, Priority 5, Epic ‘’]
the ... syntax in tick label position lists is inherently limited to [-16384, 16384] (it inherits the limitations of \foreach). Think about alternatives

pgfplotstodo.tex:5434

Feature Proposal [open, Priority 5, Epic ‘]

Implement document-level javascript for the clickable lib WITHOUT the eforms/insdljs package

should be quite straight-forward. Unless resource-acquisition problems occur (i.e. interoperability issues with other packages)

See

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

staggered tick labels

<http://peltiertech.com/Excel/Charts/Staggered.html>

implement a feature which applies a “suitable” `yshift` to every second tick label such that they can be denser

pgfplotstodo.tex:5497

Feature Proposal [open, Priority 5, Epic 'Bar plots']

interrupted bar plots

see the interesting things at

<http://peltiertech.com/Excel/Charts/axes.html#Broken> broken (y) axis:
remove interval [a,b] idea: if $y < a$: visualize as usual if $a < y < b$: use coordinate $y = a$ if $b < y$: use coordinate $y = y - (b - a)$ axis:

- compute two sets of axis descriptions. Perhaps one can try to compute the step size just once, and discard only [a,b] afterwards? This would require to use a canvas axis length corresponding to the unremoved axis range. BTW: I need access to the unremoved axis range; both for tick computation and for 'nodes near coords' or the clickable lib.
- draw a decoration at the break.
- perhaps also a decoration near affected coords.
- perhaps I should apply the thing during the visualization phase, not before. Then, I have all limits and the correct coordinates; only canvas coords are affected.

discontinuity in the middle of a plot (as an example see the phase diagram of water http://pruffle.mit.edu/3.00/Lecture_29_web/img20.gif)

GROUP BARS

Bar plots: simplify grouped bars

related: suppress bar shift if one group element is missing <http://tex.stackexchange.com/questions/71350/two-level-labels-in-bar-plot>

related: Nested groups: <http://tex.stackexchange.com/questions/198943/unclutter-a-bar-plot-with-pgfplot>

Hi Joshua,

as already mentioned, your old mails from January have slipped my discipline... I am sorry

You asked for a simpler way to

- a) position groups of bars without having to compute 'bar shift' manually
- b) a simpler way to get "significance stars".

First, grouped bar charts are an open feature request in pgfplots, and your input will eventually

The first request is actually possible, assuming that you always provide them in the sequence

The default is

```
/pgfplots/ybar/.style={
  /pgf/bar shift={%
    % total width = n*w + (n-1)*skip
    % -> subtract half for centering
    -0.5*(\numplotsfactualltype*\pgfplotbarwidth + (\numplotsfactualltype-1)*#1},%
    % the '0.5*w' is for centering
    (.5+\plotnumofactualltype)*\pgfplotbarwidth + \plotnumofactualltype*#1},%
  }
}
```

and my modification substitutes every index and 'n' by half of it:

```
\pgfplotsset{
  % #1 = separation between bars
  bar shift for half number plots/.style={%
    /pgf/bar shift={%
      % total width = n*w + (n-1)*skip
      % -> subtract half for centering
      -0.5*(\numplotsfactualltype/2*\pgfplotbarwidth + (\numplotsfactualltype/2-1)*#1},%
      % the '0.5*w' is for centering
      (.5+div(\plotnumofactualltype,2))*\pgfplotbarwidth + div(\plotnumofactualltype,2)*#1},%
    },%
  },%
  bar shift for half number plots/.default=2pt,
}
```

With this definition, you do not have to write 'bar shift' in your styles.

The whole figure becomes

```

\usemodule[pgfplots]
\pgfplotsset{compat=newest}

\pgfplotsset{HeartControl/.style=
{
    red, fill=red!33!white,
    %bar shift=-0.1667
}}
\pgfplotsset{HeartDiabetes/.style=
{
    red!33!black, fill=red!66!white,
    %bar shift=+0.1667
}}
\pgfplotsset{KidneyControl/.style=
{
    orange, fill=orange!33!white,
    %bar shift=-0.1667
}}
\pgfplotsset{KidneyDiabetes/.style=
{
    orange!33!black, fill=orange!66!white,
    %bar shift=+0.1667
}}

\pgfplotsset{/pgfplots/ybar legend/.style=
{
    /pgfplots/legend image code/.code={%
        \draw[
            ##1, /tikz/.cd,
            bar width=0.25em,
            yshift=-0.27em,
            bar shift=0pt
        ]
        plot coordinates {(0pt,0.8em)};
    }
}}

\pgfplotsset{
    % #1 = separation between bars
    bar shift for half number plots/.style={%
        /pgf/bar shift={%
            % total width = n*w + (n-1)*skip
            % -> subtract half for centering
            -0.5*(\numplotssofaractualtype/2*\pgfplotbarwidth + (\numplotssofaractualtype/2-
            % the '0.5*w' is for centering
            (.5+div(\plotnumofactualtype,2))*\pgfplotbarwidth + div(\plotnumofactualty
        },%
    },%
    bar shift for half number plots/.default=2pt,
}

```

```

\starttext

\starttikzpicture
  \startaxis
  [
    bar width=0.3,
    ybar,
    bar shift for half number plots=5pt,
    xtick=data,
    ylabel={mRNA level},
    ymin=0,
    xmin=0.333, xmax=2.667,
    xtick={1,2}, xticklabels={Heart,Kidney},
    error bars/y dir=both,
    error bars/y explicit,
    legend columns=2,
    legend pos=outer north east,
    legend cell align=left
  ]

  \addplot+[HeartControl] coordinates {(1,1) +- (0,0.1)};
  \addplot+[KidneyControl] coordinates {(2,1) +- (0,0.12)};
  \addplot+[HeartDiabetes] coordinates {(1,1.1) +- (0,0.2)};
  \addplot+[KidneyDiabetes] coordinates {(2,0.8) +- (0,0.05)};

  \draw (axis cs:2,1.15) +(-2.2em,0) -- +(2.2em,0);
  \node[anchor=south, yshift=-1ex] at (axis cs:2,1.15) {*};

  \legend{{\kern-0.1em}, Control, {\kern-0.1em}, Diabetes}

  \stopaxis
\stoptikzpicture

\stoptext

```

I suppose you could even simplify the styles by means of a cycle list or whatever.

I also experimented with symbolic x coords, but how would you write "xmin=0.3333" or "bar

You can use

```

\def\heartUnit{1}
\def\kidneyUnit{2}

```

to introduce constants - this might make it more readable.

I am aware of the fact that this solution comes way too late. Perhaps it proves to be useful

Kind regards

Christian

pgfplotstodo.tex:5794

Feature Proposal [open, Priority 5, Epic 'Bar plots']

It is surprisingly difficult to have JUST axis ticks and tick labels and labels, but NO axis line. This is because I accidentally made `axis x line=none` equivalent to `hide x axis`. Too bad.

Idea: implement keys `axis x line hidden=true,false`. Perhaps with options `axis x line=bottom hidden` which is the same as `axis x line hidden,axis x line=bottom?`

pgfplotstodo.tex:5803

Feature Proposal [open, Priority 5, Epic 'Bar plots']

feature-requests:#43 Option to set the BaseValue of a bar plot
<https://sourceforge.net/p/pgfplots/feature-requests/43/>

Is it possible to have bar plots which do not start from the x or y axis?. For example a bar plot from (0,2) to (0,3).

<http://tex.stackexchange.com/questions/161530/how-can-i-create-unbound-horizontal-bar-plots>

pgfplotstodo.tex:5808

Feature Proposal [open, Priority 5, Epic 'Bar plots']

Allow 3d bar plots (see also <http://tex.stackexchange.com/questions/176347/2d-bar-chart-in-3d-space/176363#176363>)

pgfplotstodo.tex:5822

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

Individual bars: allow to modify / adjust the bar plot handler(s) such that each bar can have its individual appearance

- create individual `\path` instructions for every bar
- discard the outer `\path` at the end
- allow simple styles of sorts `bar 1/.style={...}` or `bar value 1.23/.style={...}` perhaps using prefix search? similar to the request for nodes near coords
- should be dependent on point meta (like scatter plots)

There is some preparation key at `begin bar` combined with `at end bar` in the bar plot handlers. It can be used as low-level backend, but it still needs to be worked out (see `unittest_bar_shade_atbeginbar.tex`)

<http://tex.stackexchange.com/questions/116765/particular-bar-plot-with-pgfplots-bar-color-category>

pgfplotstodo.tex:5826

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

nodes near coords: allow styles of sorts `node near coord 1/.style={...}` or `node near coord value 1.23/.style={...}` (similar to the feature request for bar plots)

pgfplotstodo.tex:5837

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

bar plots: auto-select axis limits, unit size, bar width, and bar shift.

Perhaps it is sufficient to auto-select bar width.

In particular, the default settings should never hide a bar (especially not half of a bar)

<http://w3facility.org/question/spacing-in-pgfplots-bar-plot/>

<http://tex.stackexchange.com/questions/147945/pgfplots-bar-graph-axis-distance>

pgfplotstodo.tex:5843

Feature Proposal [open, Priority 5, Epic ‘’]

allow better default styles for bar plots, compare

<http://tex.stackexchange.com/questions/116830/polar-plot-x-and-y-ticks-and-units>

pgfplotstodo.tex:5856

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

polar axes: polar bar plots (see sourceforge feature request and http://matplotlib.sourceforge.net/examples/pylab_examples/polar_bar.html)

pgfplotstodo.tex:5860

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

chunked bars: interrupt the bars at predefined coordinates (like white grid lines)

pgfplotstodo.tex:5871

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

bar plots:

- bar interval plot handler which *assumes* uniform distances. This allows to eliminate the last, superfluous grid point (because it can be generated automatically as $x_{\text{last}} + h$ for known h)
- in fact, I could also implement $x_{\text{last}} + h_{\text{last}}$ and introduce a new name like ‘bar interval*’ or something like that

pgfplotstodo.tex:5885

Feature Proposal [open, Priority 5, Epic ‘Bar plots’]

Mails from Stefan Ruhstorfer:

- Gruppierte Säulendiagramme sind nach meinem Wissenstand nur dann möglich wenn man in der Axis-Definiton die Bedingung y_{bar} angibt. Ich finde diese Ausrichtung sehr unflexible, da ich sehr oft über das Problem stolpere, dass ich in meinem gruppierten Säulendiagramm noch eine waagrechte Linie oder ähnliches einzeichnen möchte um z.B. meine obere Toleranzgrenze einzuzeichnen. Bis jetzt mache ich das über den normalen draw Modus, was auch ausgezeichnet funktioniert. Jedoch habe ich dann das Problem, dass ich keinen schönen Legendeintrag mehr bekomme. Hier hätte ich 2 Vorschläge. Zum einen die Legende ”freier” zu gestalten. Also so, dass man beliebig (ggf. auch ohne Plot) ein Legendenelement hinzufügen kann und vllt. noch das zugehörige Symbol festlegen kann. (Bis jetzt habe ich das Problem, das ich mit tricksen zwar meine Obere

Tolerangrenze in die Legende bekomme, dann jedoch mit einem Säulenzeichen davor). Der andere Vorschlag ist, dass Säulendiagramm anders zu definieren. So das ich auch noch einen Plot hinzufügen kann, der mir eine waagrechte Linie ohne zu tricksen einzeichnen lässt.

- Eine Gruppierung von stacked bars ist nach meinem Wissen nicht möglich. Es ist zwar schwer sich ein Anwendungsgebiet dafür vorzustellen, aber wenn sie danach mal suchen (speziell im Excelbereich) werden sie sehen, dass viele Leute so eine Funktion benutzen. \rightsquigarrow siehe auch folgemails mit Beispielskizzen \rightsquigarrow beachte: Fall 2.) erfordert mehr arbeit als lediglich 'line legend', weil ybar ja den koordinatenindex verarbeitet!

grouped + stacked bar: <http://tex.stackexchange.com/questions/71350/two-level-labels-in-bar-plot>

pgfplotstodo.tex:5889

Feature Proposal [open, Priority 5, Epic 'Bar plots']

let stacked bar plots respect the line width when stacking them on top of each other

pgfplotstodo.tex:5910

Feature Proposal [open, Priority 5, Epic 'Bar plots']

On input: provide the desired distance between adjacent bars. The bar width should be automatically determined in a way which shows all bars.

An extreme case would degenerate to ycomb.

If the plot area does is insufficient, bar distances should be restricted (?)

Note: if (and only if) the bars have unit distance 1, a relative distance is already supported by providing bar width=0.9 or something like that...

Note: if we knew the distance between adjacent ticks, and we assume that each tick has its associated bar plot, we could define the bar width in terms of the tick distance... perhaps I should expose read-only access to the list of (computed) tick positions; with a convenience method to access the common distance? Or just a common distance?

see also <http://www.faqsys.info/pgf-plots-barplot-irregular-spacing-between-barscolumns/>

pgfplotstodo.tex:5916

Feature Proposal [open, Priority 5, Epic 'Bar plots']

bar plots: if you provide both, the desired distance between adjacent bars and the bar width, the axis limits should be increased or decreased automatically.

This is actually a more generic concept: it would be 'scale mode=limits only' (?)

pgfplotstodo.tex:5920 **Feature Proposal** [open, Priority 5, Epic 'Bar plots']
Default bar plot styles should always include the (correct) origin in the visible axis range.

pgfplotstodo.tex:5926 **Feature Proposal** [open, Priority 5, Epic 'Bar plots']
It should be simpler to customize the position of nodes near coords in a way to position them in the middle or below each bar.

This is particularly difficult for stacked bar plots

pgfplotstodo.tex:5944 **Feature Proposal** [open, Priority 5, Epic '']
modify the `node[at=<pos>]` feature such that `node[at value=42.4]` or `at max value` or `at min value` or `node[at coordindex=3]`

pgfplotstodo.tex:5951 **Feature Proposal** [open, Priority 5, Epic '']
Layered graphics: consider drawing tick lines which are on the "outer part" of the axis on the foreground layer.

See
<http://tex.stackexchange.com/questions/31708/draw-a-bivariate-normal-distribution-in-tikz/>
for a motivation (the tick lines are hidden by the surface)

pgfplotstodo.tex:5955 **Feature Proposal** [open, Priority 5, Epic '']
allow support for units in `bar width` and `bar shift` (compare the implementation for circles/ellipses)

pgfplotstodo.tex:5972 **Feature Proposal** [open, Priority 5, Epic '']
it would be nice to have automatic PNG export for huge graphics. Such an approach, combined with plot graphics, could result in considerably smaller pdfs and faster rendering. At the same time, it would not suffer the limitation which arises if one uses the external lib and converts the complete figure to png (including axis descriptions)

pgfplotstodo.tex:5982

Feature Proposal [open, Priority 5, Epic ‘’]

There is no simple way to provide LOG colorbars:

1. `ymode=log` is not supported in ‘every colorbar’ due to key filtering problems
2. `disablelogfilter` appears to be useless and does not respect ‘log basis’

If those two this would be fixed, one could provide `colorbar style={ymode=log,disablelogfilter}` and would get a proper logarithmic colorbar. Perhaps even combined with `log basis ... ?`

pgfplotstodo.tex:5986

Feature Proposal [open, Priority 5, Epic ‘’]

Cases-statement in math parser

pgfplotstodo.tex:5990

Feature Proposal [open, Priority 5, Epic ‘’]

the `empty line` feature should produce a log notice when it finds an empty line in compat mode.

pgfplotstodo.tex:5998

Feature Proposal [open, Priority 5, Epic ‘’]

Support something like

```
\addplot table[x symbolic expr={\thisrow{year}-\thisrow{month}-\thisrow{day}}].
```

pgfplotstodo.tex:6002

Feature Proposal [open, Priority 5, Epic ‘’]

What about a ‘draft’ mode which does nothing but typeset an empty axis without descriptions?

pgfplotstodo.tex:6010

Feature Proposal [open, Priority 5, Epic ‘’]

Provide features of an axis *outside* of the axis environment. For a start, this could use the `axis cs` (or an alias to it).

Details and examples:

https://sourceforge.net/tracker/?func=detail&atid=1060659&aid=3086794&group_id=224188

pgfplotstodo.tex:6014

Feature Proposal [open, Priority 5, Epic ‘’]

add ‘force 2d axis’ key (or similar)

- pgfplotstodo.tex:6032 **Feature Proposal** [open, Priority 5, Epic ‘’]
Support standard filters for `hist` and its variants.

Improve filtering for `hist` and similar plot handlers.

I already added the `hist/data filter` and `pre filter` keys (undocumented!). Use them.
- pgfplotstodo.tex:6037 **Feature Proposal** [open, Priority 5, Epic ‘’]
the `'xtick'` syntax accepts only numbers, not even constant expressions are possible (and `'pi'` is even more complicated).
- pgfplotstodo.tex:6042 **Feature Proposal** [open, Priority 5, Epic ‘’]
Table Package: support context-based `row predicates` (some kind of WHERE clauses)
- pgfplotstodo.tex:6046 **Feature Proposal** [open, Priority 5, Epic ‘’]
support the `/data point/x` method for all key filters and in all contexts (i.e. in the same context where `\thisrow` is accepted)
- pgfplotstodo.tex:6050 **Feature Proposal** [open, Priority 5, Epic ‘’]
Support selection of individual 3D axis lines which shall be drawn (or “floor”)
- pgfplotstodo.tex:6063 **Feature Proposal** [open, Priority 5, Epic ‘’]
linear regression which passes through (0,0) (see mail of Stefan Pinnow)
- pgfplotstodo.tex:6068 **Feature Proposal** [open, Priority 5, Epic ‘’]
plot graphics 3D: handle the case when the first two points share the same x (or y) coordinate
- pgfplotstodo.tex:6072 **Feature Proposal** [open, Priority 5, Epic ‘’]
`hist` does not allow modifications to the data range
- pgfplotstodo.tex:6082 **Feature Proposal** [open, Priority 5, Epic ‘’]
feature to replicate axis descriptions on both sides

- pgfplotstodo.tex:6089 **Feature Proposal** [open, Priority 5, Epic ‘] couldn't you add something like `\providecommand*\pgfplotsset[1]{}` to the "tikzexternal.sty" so one doesn't have to do it by hand when switching from tikz/pgfplots?
- pgfplotstodo.tex:6159 **Feature Proposal** [open, Priority 5, Epic ‘] Das pos= feature funktioniert nur ungenau fuer smooth. Implementiere es genauer.
- pgfplotstodo.tex:6164 **Feature Proposal** [open, Priority 5, Epic ‘] make work `\matrix in \matrix` so one can use groupplots or "Alignment in Array Form" (section 4.18.4) with legends
- pgfplotstodo.tex:6192 **Feature Proposal** [open, Priority 5, Epic ‘] groupplots: group-wide axis labels
- pgfplotstodo.tex:6210 **Feature Proposal** [open, Priority 5, Epic ‘] is there a way to get the current row/col index during addplot?
- pgfplotstodo.tex:6236 **Feature Proposal** [open, Priority 5, Epic ‘]
 plot
 shell: - It would be nice if the standard shell interpreter could be replaced. Idea:
`\pgfkeys{/pgfplots/plot shell/interpreter/.code 2 args={sh #1 > #2}}`
 then in the code
`\pgfkeysvalueof{/pgfplots/plot shell/interpreter/.@cmd}{#1.sh}{#1.out}\pgfeov`
 - the pgfshell macro is quite general and could be added to pgf (as suggested by you, Stefan). However, this would also need modifications in tikz.code.tex to get some sort of high-level user interface. I find plot shell very useful, and it could be added easily. My suggestion: Either write a high level user interface for tikz or rename the command to pgfplotshell and put it into pgfplotscoordprocessing.code.tex. In the meantime, I added it to pgfplotscoordprocessing.code.tex (bottom). - there is a potential difficulty with the 'addplot table shell' command (which is a good solution!): the semicolon in this routine will have a fixed catcode. But packages like babel with french language will change it to active, so french people can't use addplot table shell. The solution is technical and I am not proude of my own anyway... we'll just have to think about one. - documentation for the 'table shell' feature is missing yet. - I am not sure if the replication of /tikz/prefix and /tikz/id is helpful or confusing...

pgfplotstodo.tex:6254

Feature Proposal [open, Priority 5, Epic ‘]

new `\plotnumofactualtype` thing: if you set `/tikz/` plot handlers in `\begin{axis}`, they won't be set before the visualization phase. consequently, I can't count them! Idea: add a 'family' to each of them. Or wright a coord filter which checks for `\tikz@plot@handler` . Or write pgfplots styles which set them.

pgfplotstodo.tex:6379

Feature Proposal [open, Priority 5, Epic ‘]

polar:

- is my current datascaling approach correct? I mean, is the linear trafo feasible at all?
- the `*affine*` radius `datascaletrafo` could be enabled, if only parts of the circle are drawn at all, for example `xmin=0,xmax=45,ymin=1e-4,ymax=1.003e-4` Idea: check arc size and disable the radius `*affine*` data scaling only if the arc has more than 90 (?) degrees Is that mathematically correct? And: is it useful at all?
- handle "empty axis". It should reset to a circle, not a box.

pgfplotstodo.tex:6383

Feature Proposal [open, Priority 5, Epic ‘]

patch visualization: provide displacement input format

pgfplotstodo.tex:6415

Feature Proposal [open, Priority 5, Epic ‘]

the following keys should process their argument with `pgfmathparse`:

xyz tick,

- min/max
- tickmin/max
- meta min/max
- domain/ y domain,
- error bar arguments,
- without FPU: width/height/ view
- check optimizations of the math parser!
- check if I can activate the FPU during the survey phase!

TODO: check which ones are missing. Some of them have been added in the meantime

pgfplotstodo.tex:6425

Feature Proposal [open, Priority 5, Epic ‘]

Idea for input stuff: implement high level user interface for coordinate input, similar to the pgf basic level framework. Then, add styles on top of it (try to be compatible with DV engine)

pgfplotstodo.tex:6447

Feature Proposal [open, Priority 5, Epic ‘]

new plot structure : use the ‘/data point’ key interface coming with pgf CVS

pgfplotstodo.tex:6525

Feature Proposal [open, Priority 5, Epic ‘]

quiver plots:

- allow to disable update of axis limits
- provide rescaling of arrows such that they don’t overlap. manual rescaling is simple, auto is more difficult. auto: if I have a matrix, I could rescale such that its mesh width is larger than the largest vector. Same fo a vector of input data. But what if I don’t know whether it’s a vector or matrix? \rightsquigarrow second run. \rightsquigarrow after the first, it should be possible to autocomplete the mesh rows/cols. Try it. If that works, we have a matrix. \rightsquigarrow could be done from within the scanlinewidth routines: auto-detect mesh/rows mesh/cols mesh/ordering mesh/width but that fails if there is no scanline marker.
- what with log plots? What with other axis features like symbolic trafos? \rightsquigarrow need difference type!
- that is: quiver plots in log coords are *multiplicative* and invoke the same routines. make special handling for ‘0’.
- allow feature where (u,v) are *coords*, not vectors. this could allow additive log quiver plots.

pgfplotstodo.tex:6529

Feature Proposal [open, Priority 5, Epic ‘]

plot expression: make the sampling parameters available within survey phase

pgfplotstodo.tex:6533

Feature Proposal [open, Priority 5, Epic ‘]

the table package uses a lot of logs – but it can’t change the log basis.

pgfplotstodo.tex:6538

Feature Proposal [open, Priority 5, Epic ‘]

3D + axis line variants: someone might prefer GRID LINES as for the boxed case combined with axis line=left...

Feature Proposal [open, Priority 5, Epic ‘]

Mail by Hubertus Bromberger:

- ✓Period in legend, without the need of using the math environment?
`\legend{ML spcm$. $, CW spcm$. $, ML AC};`
- Maybe a more straight forward way for legend to implement something like shown in the graph. (see his mail .tex) \rightsquigarrow plot marks only at specific points. thus, the legend image should contain both lines and marks, but there are effectively two addplot commands.
- As a physicist, I often have the problem to fit curves. A job gnuplot can do very well. It should be possible using "raw gnuplot" but maybe you can either provide an example or even implement a more straight forward way for this purpose.
- The color scheme is not really my taste. In CONTEXT:

```

cycle list={%
{Col1,mark=*},
{Col2,mark=square*},
{Col3,mark=diamond*},
{Col4,mark=star},
{Col5,mark=pentagon*},
{Col6,mark=square*},
{Col7,mark=diamond*},
{Col8,mark=triangle* }}
\definecolor[Col1] [r=0.24106,g=0.05490,b=0.90588] % blau
\definecolor[Col2] [r=1,g=0.05490,b=0.06667] % rot
\definecolor[Col3] [r=0.65490,g=0.73333,b=0.01176] % grn
\definecolor[Col4] [r=0.08627,g=0.92549,b=0.91373] % tyrkis
\definecolor[Col5] [r=1,g=0.5,b=0] % orange
\definecolor[Col6] [r=0.54118,g=0.51765,b=0.51765] % grau
\definecolor[Col7] [r=0.80784,g=0.49804,b=0.06275] % okker
\definecolor[Col8] [r=0.74902,g=0.07451,b=0.91765] % lila

```

- Sometimes it would be good to have a bit more of a programming language, but still that's not what tex is made for. The python-script looks promising, it's just, that I think it doesn't work with context.

Feature Proposal [open, Priority 5, Epic ‘]

add something like

```

\pgfplotstabletypeset[
cell { 1 }{ 2 }={\multirow{*}{3}{text}}
]

```

pgfplotstodo.tex:6635

Feature Proposal [open, Priority 5, Epic ‘]

ternary diagrams todo:

- the `\pgfplotsqpointoutsideofaxis` work only for position 1, nothing in-between (since it doesn't compute the other axis components correctly)
- data ranges are currently only correct if in $[0,1]$ or if one provides the `[xyz]min` and `[xyz]max` keys (and the ternary limits `relative=false`). How should it work!?

pgfplotstodo.tex:6652

Feature Proposal [open, Priority 5, Epic ‘]

contour:

- `labels=true,false,auto` \rightsquigarrow auto should deactivate labels if there are too many contour lines.
- labels should not be clipped...
- add label position shifting facilities. \rightsquigarrow identify by contour label `*and*` an optional index. There may be more than one line.

pgfplotstodo.tex:6658

Feature Proposal [open, Priority 5, Epic ‘]

filled contour plots (prototype is 10% ready)

works by means of gnuplot if the outer region is extended artificially. However, color data needs to be compensated etc.

pgfplotstodo.tex:6667

Feature Proposal [open, Priority 5, Epic ‘]

DUPLICATE `contourf`: I guess filled contour plots could be possible if always two adjacent color levels are combined into a single path which is then filled with the simplified even/odd rule (not the winding fill rule). With the underlying smoothness assumption C^0 , there can't be any level between two adjacent ones, and there can't be self-intersections.

pgfplotstodo.tex:6672

Feature Proposal [open, Priority 5, Epic ‘]

it would be very interesting to allow more flexible handling of empty lines in input data, especially files.

pgfplotstodo.tex:6691

Feature Proposal [open, Priority 5, Epic ‘]

contour draft TODO:

- color of text nodes
- make sure there is at least one label node
- implement contourf
 - often: use ‘even odd rule’ to fill adjacent contours.
 - but this works only if adjacent contours are contained in each other.
 - if that’s not the case, perhaps I need to add an artificial path from the data limits.
 - idea: in case I know the corner values, I’d know which contour plateau requires the artificial path.
 - other idea: I could implement some sort of even-odd rule in TeX. This should also yield the information.

pgfplotstodo.tex:6697

Feature Proposal [open, Priority 5, Epic ‘]

implement simplified constructions to access DIFFERENCE coordinates. For example, `\draw ellipse` needs x radius and y radius.

pgfplotstodo.tex:6718

Feature Proposal [open, Priority 5, Epic ‘]

the ‘table/y index’ should be changed. It should be $\min(\text{numcols}, 1)$ instead of 1.

pgfplotstodo.tex:6729

Feature Proposal [open, Priority 5, Epic ‘]

table package and axes should improve their communication. Namely:

-
- communicate table names.
- communicate xmode/ymode
- communicate log basis [xy]

pgfplotstodo.tex:6734

Feature Proposal [open, Priority 5, Epic ‘]

provide and document access to (sanitized?) mesh/rows and mesh/cols fields during the survey phase. This might allow 2d key filters

pgfplotstodo.tex:6741

Feature Proposal [open, Priority 5, Epic ‘]

Praktisch fände ich, wenn man folgende Dinge spezifizieren kann: 1. Welche Zeilen aus der Datei ausgelesen sollen (häufig gibt es nicht nur 1, sondern mehrere Header-Zeilen, oder auch am Ende noch sonstige Zeilen)

pgfplotstodo.tex:6768

Feature Proposal [open, Priority 5, Epic ‘]

improve support for multiple ordinates

1.

```
* \pgfplotsset{set layers}
* scale only axis
* xmin=..., xmax=...,
* axis y line*=left
* axis y line*=right
* axis x line=none
```

would be hidden in the doubleaxis definition,

2. the first addplot would be the left one and the second, the right one, (???)
3. the comma separated list in the legend command’s argument applies successively to the two addplot.
4. the colours of the two plots are given by the color cycle list.

pgfplotstodo.tex:6781

Feature Proposal [open, Priority 5, Epic ‘]

it would be useful if the clipping could be disabled for certain parts of the axis. Is that possible?

- yes. Idea: start clipping for every axis element separately! Shouldn’t be much more expensive than a single marker path.
- should work in the same way as before, there is no difference!
- scopes should introduce no further problems
- I could eliminate the nasty marker list

pgfplotstodo.tex:6786

Feature Proposal [open, Priority 5, Epic ‘]

provide a `\pgfplotspathcube` command as generalization from the cube marker. The cube command should work similar to `pathrectangle` or `rectanglecorners`.

pgfplotstodo.tex:6796

Feature Proposal [open, Priority 5, Epic ‘]

re-implement sampling loops. I should discard the compatibility with foreach internally in order to gain accuracy! Maybe it is necessary to invoke different loops - one for tikz foreach (samples at) and one ”standard” sampling routine.

todo : activate

pgfplotsforeachgroupeduniform@loop@mathengine@PRECISE@CURRENTLY@UNUSED@

pgfplotstodo.tex:6839

Feature Proposal [open, Priority 5, Epic ‘]

optimization ideas:

- replace `\pgfpointscale` with a ‘q’ version \rightsquigarrow it invokes the expensive math parser.
- `pgfmultipartnode` evaluates every anchor twice
- implement a cache for expensive, repeated math operations like ‘view’ directions or common results of $1/||e_i||$.
- search for unnecessary math parser invocations; replace with ‘q’ versions if possible.
- implement a hierarchical generalization of the ‘applist’ container (a tree applist of arbitrary length)
- eliminate the deprecated ‘non-legend-option’ processing.
- remove the different (empty) paths of the axis node – it appears they are not necessary and waste only time and mem.
- try implementing an abstract ‘serialize’ and ‘unserialize’ method - it might be faster to re-process input streams instead of generating preprocessed coordinate lists.
- try to reduce invocations of `pgfkeys`
- optimize the filtered `pgfkeys` invocations - the filter is slower than necessary!
- the plot mark code invokes a lot of math parsing routines - which is a waste of time in my opinion. All expressions etc. have already been parsed.
- the point meta transform is set up twice for scatter plots.
- my elementary data structures always use `\string` to support macros as data structure names. I fear this might be ineffective. Perhaps its better to check if the argument is a macro (at creation time, thus only once) and call `\edef#1{\string#1}` to assign some sort of name to it. This will invoke `\string` only once. Is this faster?

- eliminate the 'veclength' invocations for single axes - they can be replaced with "inverse unit length * (max-min)"
- the key setting things can be optimized with pgfkeysdef
- create the /pgfplots/.unknown handler (.search also=/tikz) once and remember it.
- the (new) tick label code might be very expensive:
 - check for (unnecessary) calls to \pgfpointnormalised – the normal vectors are already normalised!
 - check the cost for bounding box size control of the tick labels – maybe this can be optimized away if it is not used. But this decision is not easy.

pgfplotstodo.tex:6844 **Feature Proposal** [open, Priority 5, Epic ‘']
 perhaps math style
`{grid=major, axis x line=middle, axis y line=center, tick align=outside}`

pgfplotstodo.tex:6853 **Feature Proposal** [open, Priority 5, Epic ‘']
 provide access to axis limits and data bounding box. It would be useful to get access to axis coordinates, for example in 'circle (XXX)'

pgfplotstodo.tex:6858 **Feature Proposal** [open, Priority 5, Epic ‘']
 allow math expressions for axis limits etc. Idea: try float parsing routine; if it fails: use math parser first.

pgfplotstodo.tex:6865 **Feature Proposal** [open, Priority 5, Epic ‘']
 write a public math interface which provides access to axis internals like limits, the 'dimen-to-coordinate' method and so on. ~> it might be useful to use pgfmathparse for any numerical input argument as well.

pgfplotstodo.tex:6901 **Feature Proposal** [open, Priority 5, Epic ‘']
 Store the axis limits into the axis' node as saved macros. This would allow

- 'use [xy] limits of= axis name ;'
- access to axis limits from other macros.
- provide a command `\pgfplotslimits{current axis}{x}{min}` which expands to the 'xmin' limit. PROBLEM: to WHICH limit: the untransformed one? The transformed one? The logarithmized one?

- \int I can't compute $\exp(x_{\min})$ in log plots!
- Ideas:
 - provide both, if possible. It is NOT possible for log axes.
 - use log-limits (possibly combined with 'logxmin=' option ?)
 - The operation requires several operations because floats need to be converted. Idea: do that only for NAMED AXES.
 - all user-interface macros must be expandable!
 - I don't want to spent time for number format conversions unnecessarily here!
 - provide `\pgfplotslimits` and `\pgfplotstransformedlimits` combined with simpler key-value interfaces
 - I could also provide access to the unit lengths (they are available as macro anyway)
 - ALTERNATIVE: implement access to axis limits as a math function which simply defines `\pgfmathresult`.
 - that is probably the most efficient way to do it. I only need to register the new function(s) to PGF MATH.
 - PGF 2.00: use `\csname pgfmath@parsefunction@\pgfmath@parsedfunctionname\endcsname`
 - PGF \int 2.00: use `\pgfmathdeclarefunction` Is it possible to provide 'string' arguments which are not parsed? No.

pgfplotstodo.tex:6907

Feature Proposal [open, Priority 5, Epic ‘]

I could provide public macros for the data transformations (and inverse transformations). This would also allow relatively simple access to axis limits.

pgfplotstodo.tex:6911

Feature Proposal [open, Priority 5, Epic ‘]

cycle list should be implemented using an array structure. That's faster.

pgfplotstodo.tex:6917

Feature Proposal [open, Priority 5, Epic ‘]

what about a feature like 'draw[xmin=...,xmax=...] fitline between points (a) (b)'?

pgfplotstodo.tex:6921

Feature Proposal [open, Priority 5, Epic ‘]

interpolate missing coordinates for stacked plots.

pgfplotstodo.tex:6927

Feature Proposal [open, Priority 5, Epic ‘]

the error bar implementation is relatively inefficient. Think about something like ‘/pgfplots/error bars/prepare drawing’ which sets common style keys for every error bar

pgfplotstodo.tex:6957

Feature Proposal [open, Priority 5, Epic ‘]

think about using a combination of the visualization engine of pgf CVS and my prepared-list-structure. Maybe I can adjust the list format for the current plot type? I need

- scatter/line plots 2D
- meta coords
- quiver may need extra vectors
- matrix plots may need twodimensional structure
- error bars could be handled more consistently
- ...
- \downarrow implement a visualization class which provides methods
 - prepare()
 - visualize()
 - serialize()
 - visualizestream() and provide protected pgfplots methods
 - axis \rightsquigarrow preprocesscoordinate (filters, logs)
 - visualizer \rightsquigarrow prepare()
 - axis \rightsquigarrow processcoordinate()
 - visualizer \rightsquigarrow serialize()
 - axis \rightsquigarrow postprocesscoordinate() The markers as they are implemented now don’t really fit into this framework. The clipping region is not really what I want here... Idea: enable/disable clipping separately for each drawing command!

pgfplotstodo.tex:6961

Feature Proposal [open, Priority 5, Epic ‘]

the coordindex shouldn’t be changed by z buffer=sort

Feature Proposal [open, Priority 5, Epic ‘]

table package: provide abstract layer for low level storage interface. Idea: the interface should allow the container interface

- `push_back()`
- `get(i)`
- `set(i)`
- `foreach()`
- `pop_front()`
- `newempty()`
- `clone()`
- `unscope()`
- `startPushBackSequence()`
- `stopPushBackSequence()`

↪ this could allow to use arrays for fast algorithms. At least it would make things easier to read. Problem as always: the ‘`unscope()`’ operation. Currently, I have two different structures: the `applist`s which have fast construction properties and the standard lists which implement the rest. Can I combine both? Yes, by means of the incremental construction pattern:

```

\startPushBackSequence
\push_back
\push_back
\push_back
\stopPushBackSequence

```

↪ inside of the construction, only `\push_back` is allowed and the structure is in “locked state” (low level: `applist` repr) ↪ Idea: the creation is fast, afterwards, it has flexibility.

Feature Proposal [open, Priority 5, Epic ‘]

`imagesc` combined with input of sorts

```

-3 -2 -1 0 1 2 3
0 0 1 2 3 4 5 6
1 1 2 3 4 5 6 7
2 2 3 4 5 6 7 8
3 3 4 5 6 7 8 9

```

pgfplotstodo.tex:7081

Feature Proposal [open, Priority 5, Epic ‘]

Ein weiteres wnschenswertes Feature aus meiner Email ist, dass man die ”diverging” Colorbars von <http://colorbrewer2.org/#> symmetrisch um 0 (also z.B. von -60 bis $+60$) zuweist, dann aber nur in der Colorbar Werte von -30 bis $+60$ zeigt, weil eben keine tieferen Werte als -30 vorhanden sind. Damit wrde die 0 nach wie vor wei bzw. gelb bleiben (in den Colorbars von <http://colorbrewer2.org/#>). Der Feature-Request gilt brigens allgemein fr die Colorbar und nicht zwingend fr die colorbar `sampled`. Ich glaube, dass war eins der Features, die du aus meiner Email nicht verstanden hast. Wenn dem immer noch so sein sollte, kann ich auch gerne eine Dummy-Colorbar erstellen und daran zeigen, was ich meine. Manchmal sagt ein Bild ja mehr als 1000 Worte.

Feature Proposal [open, Priority 5, Epic ‘]

finish colormap access=direct

- add colorbar style
- add example of a bitmap image with palette

```
\documentclass{standalone}
```

```
\usepackage{pgfplots}
```

```
\pgfplotsset{compat=1.9}
```

```
\definecolor{YlGn-B}{RGB}{255,255,204}
```

```
\definecolor{YlGn-E}{RGB}{194,230,153}
```

```
\definecolor{YlGn-G}{RGB}{120,198,121}
```

```
\definecolor{YlGn-I}{RGB}{49,163,84}
```

```
\definecolor{YlGn-K}{RGB}{0,104,55}
```

```
\pgfplotsset{colormap={brewer}{color=(YlGn-B) color=(YlGn-E) color=(YlGn-G) color=(YlGn-I)}
```

```
\begin{document}
```

```
\begin{tikzpicture}[baseline]
```

```
\begin{axis}[anchor=center,enlargelimits=false,
```

```

Feature Proposal [open, Priority 5, Epic ‘]

pgfplotstable file open protocol: provide public listener interface

pgfplotstodo.tex:7238

Feature Proposal [open, Priority 5, Epic ‘]

`\addplot coordinates {\macro};`

pgfplotstodo.tex:7262

Feature Proposal [open, Priority 5, Epic ‘]

precise width calculation idea:

- Problem: total width depends on width of axis descriptions
- width of axis descriptions depends on position of axis descriptions
- position of axis descriptions depends on width of axis
- width of axis depends on width of axis descriptions
- non-linearly coupled system.
- Idea: introduce a loop.
 - details:
 1. place axis descriptions + the axis rectangle into a box.
 2. Measure box's width, throw it away if it is too bad. Keep it and stop iteration otherwise.
 3. recompute the complete scaling.
 4. go back to step 1.) and iterate
 - one or two iterations should be enough .
 - it's not necessary to recompute the prepared and stored plots. Just keep them in main memory until the scaling is fixed.

pgfplotstodo.tex:5326 **Feature Proposal** [open, Priority 3, Epic ‘']
add support for symlogs <http://stackoverflow.com/questions/3305865/what-is-the-difference-between-log-and-symlog>

pgfplotstodo.tex:6344 **Feature Proposal** [open, Priority 3, Epic ‘Performance’]
disable bounding box updated during addplot – it makes no sense and wastes time (unless the axis is hidden)

pgfplotstodo.tex:5322 **Feature Proposal** [open, Priority 2, Epic ‘']
faceted allows to draw the entire rectangle.

It would allow cool effects if one could draw only those lines along the x direction (or y direction).

Compare <http://tex.stackexchange.com/questions/166768/draw-a-surface-from-scattered-curves>

pgfplotstodo.tex:5341 **Feature Proposal** [open, Priority 1, Epic ‘']
Optimization: if the same plot contains `name intersections` and `fill between` or `intersection segments`: compute the intersection points just once

pgfplotstodo.tex:6182 **Feature Proposal** [open, Priority 1, Epic ‘']
nested axes would be a nice feature. TODO: - update the list of global state variables - ”interrupt” these variables somehow. - make sure local redefinitions of TikZ commands (like point commands) work; the `\let...@orig=` assignments should be handled somehow. - What about keys? They will be inherited from the outer axis... perhaps the best would be an

```
\endgroup  
<nested axis>  
\begingroup  
<restore state>
```

which includes the keys of the outer axis!?

pgfplotstodo.tex:6206 **Feature Proposal** [open, Priority 1, Epic ‘']

log plots: minor tick num would be useful here! If tick labels are placed at `'1e-5, 1e0'`, minor tick num= 4 would lead to the minor tick lines at

'1e-4,1e-3,1e-2,1e-1' which is useful. So:allow minor tick num for log axes. ~>
need to adjust the check for "uniform log ticks"

pgfplotstodo.tex:6640

Feature Proposal [cancelled, Priority 5, Epic '']

idea: 'mesh/ordering=auto'. Just check for 'x varies' and 'y varies'! The two first points inside of a scanline are enough.
