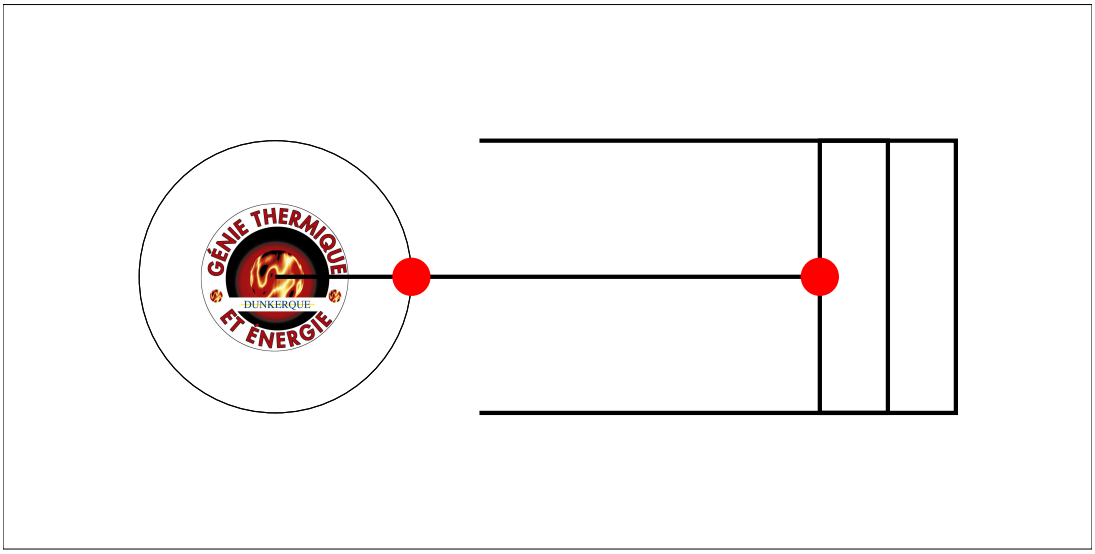
Updated on March 21, 2016



Objectives :

- One image per command or parameter.
- the minimum amount of text possible.
- the most complete possible update after update.
- keep the same structure as VisualPSTricks

Remarks : Minimal code is given to show the effect of a command or a parameter. The effects are sometime exaggerated for clarity .To consult the documentation, I have given the number of the Section in pgfmanual

You can contact me at my personal email to

- let me know the mistakes found (please indicate the page)
- give me your commentaries, your suggestions ...
